AON

How to Use the Aon Global UTM Builder

Quick Guide

Digital Marketing Center of Excellence

This guide will help you understand the following:

- What are UTMs and why are they important?
- UTM Best Practices
- What is the Aon Global UTM Builder?
- How to use Aon's Global UTM builder

What are UTMs and why are they important

A *UTM is a simple code (see below) that we add to our aon.com landing page URLs when posting it on external sources. This allows us to track traffic that is coming to our aon.com website from external sources (like emails or social media).*

> *A completed UTM URL is made up of two parts:*
>
> *Part 1 - Landing page = https://www.aon.com/xxx*
>
> *Part 2 - UTM Tag =?utm_source=linkedin&utm_medium=paid-post&utm_campaign=b_0_ri_wfr_all_hlt_na_us&utm_content=r_stl-grms_do&utm_term=example1*

UTMs are used for campaign tracking, reporting, and optimization. By tagging your URLs with UTMs, you can understand which campaigns, programs, tactics, and channels are most effective in driving traffic and conversions on aon.com. The UTM Tags also contain variables that allow activities to be grouped for reporting e.g., regional priorities, solution line, region.

The Global Optimization Dashboard enables you to evaluate the performance of your UTM-tagged activities.

Best practices for using UTMSs

When to use UTMs:

- On all publishing links to aon.com landing pages within e.g. email, social media, paid media, 3rd party platforms, or links within online pdf documents

When **NOT** to use UTMs:

- For links to external sites (not owned by Aon)
- Direct links to PDFs (links starting with: aon.com/getmedia).
- For internal page linking on aon.com. This will overwrite the other incoming UTM tags and attribute data incorrectly.

Other best practices:

- Do not use a redirect or staging link to build your UTM, **always** use the final & live URL link as your base.

- Remove other tracking parameters before creating UTMs e.g. *?elqTrackId=xxxx*
- Please do not use underscores or any other special characters such as (&,_,?,!) in your UTM.

What is the Aon Global UTM Builder?

Aon Global UTM Builder is part of Aon's global standards and helps you generate UTMs for your content/campaign activation.

How to use Aon's Global UTM builder

	Description
URL* (format: https://www.aon.com) :	The URL refers to the landing page you are driving traffic to on the aon.com domain. Always start your URL with **https://**
UTM Campaign	
AonStory*	AonStory is **default set to NO**. If you are activating the AonStory Campaign, please check the YES box.
Region*	Select the relevant 'region' you are activating for. If your activation goes across regions, you can select 'global'.
Market/ location*	Select the relevant 'market' or 'country/location' you are activating in.
Campaign*	Select the buyer/audience you are targeting.
Topic*	Select the relevant topic that most closely matches the tactic you are activating.
Industry*	Select the 'industry' you are targeting, if you are not targeting a specific industry please select 'all'
Solution Line*	Select the relevant 'solution line'. If your tactic spans across solution line you can select 'csl - cross solution line'. However, try to be as specific as possible.
Priority*	Select the relevant 'Priority' if your tactic is part of a regional priority program. Otherwise, select the value 'not aligned to priority'
UTM Content	
Funnel Stage	Does this specific activity lead to reputation, engagement, or demand outcomes? Please select the relevant value.
Signature Insights or Experiences	Is your tactic an Aon signature insight or experience? Please select the relevant value. Otherwise, select not applicable.
Tactic CTA	Select what action you want visitors to take?
UTM Source	

Source*	Select the source where you are activating the tactic with this activity. The source is where your website's traffic comes from.
UTM Medium	
Medium*	Medium is related to the source. Select the medium how your activated the traffic (organic post, paid post, referral etc).
UTM Term	
Free text fields	Use this field to add additional descriptions e.g., tactic name, agency, visual aids, keywords, A/B tests, etc...

Use Case: Hootsuite Amplify / LinkedIn MyCompany

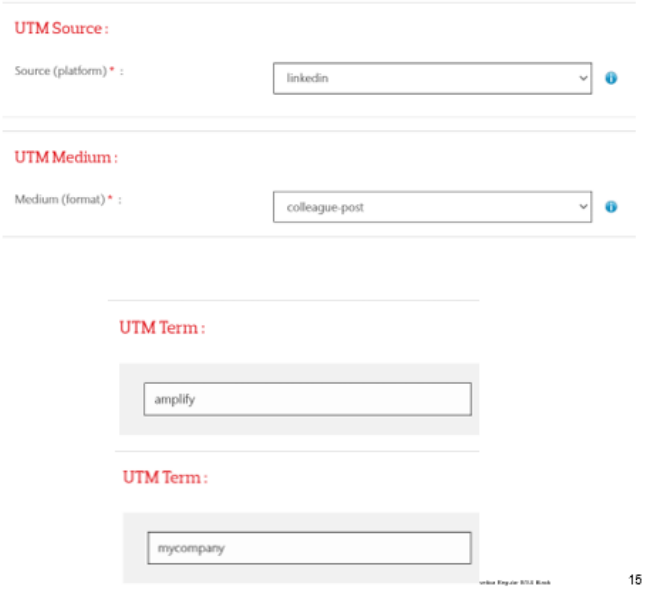
Colleague amplification use case:

"We use platforms like Hootsuite Amplify or LinkedIn MyCompany to enable colleague sharing and want to be able to monitor the traffic generated from these shares, in addition to understanding the effectiveness of these sharing platforms as part of our campaigns.

Approach:

Remember to include a UTM-tagged URL with the right parameters to ensure successful tracking of colleague shares.

For these platforms, set the UTM Source as 'linkedin' and the UTM Medium as 'colleague-post'. To differentiate between Hootsuite Amplify and LinkedIn MyCompany, we suggest adding a UTM term parameter to the UTM. The 'term' should be 'amplify' or 'mycompany' depending on the platform used for sharing the content.



15

Use Case: Events

Event use case:

"Our event/ sponsorship spans across multiple buyers and topics, which values should I select in the UTM builder?"

Approach:

For these specific use cases you can choose the following values:

However, the best practice is to be as specific as possible.

You should use UTM-tagged URLs when you are directing traffic to **aon.com** or **Eloqua** registration forms

NOTE: We're currently investigating if we can make UTMs work for **CVent**, this is not yet the case.
